### Class 6 Distributions and Phonemic Analysis

#### Sam Zukoff LING 301, Spring 2022, USC

January 31, 2022

< □ > < □ > < □</p>

Evidence from alternations

• In German, an underlying /d/ can surface either as [t] (when subject to the word-final devoicing rule) or as [d] (everywhere else).

 $/bund / \rightarrow [bunt]$  vs.  $/bund-\partial / \rightarrow [bund-\partial]$ 

イロト イポト イヨト イヨト

Evidence from alternations

• In German, an underlying /d/ can surface either as [t] (when subject to the word-final devoicing rule) or as [d] (everywhere else).

$$/bund / \rightarrow [bunt]$$
 vs.  $/bund-\partial / \rightarrow [bund-\partial]$ 

• When two allophones that belong to the same phoneme appear exclusively in distinct, predictable environments, we call that complementary distribution.

Evidence from alternations

- By definition, **alternations** give you evidence of allophonic/complementary distributions.
  - $\rightarrow~$  The same underlying sound *alternates* between two surface variants.
- But we can also identify complementary distributions in the absence of alternations.

Identifying complementary distributions (with or without alternations)

#### **\*** Procedure for identifying complementary distributions:

- 1. Identify each example that has the sounds you're interested in.
- 2. For each sound, write out the environment that each instance of that sound appears in:  ${\bf X}\_{\bf Y}$ 
  - $\hookrightarrow$  Which sound (or word boundary) comes *before*?
  - $\hookrightarrow$  Which sound (or word boundary) comes *after*?

Identifying complementary distributions (with or without alternations)

#### **\*** Procedure for identifying complementary distributions:

- 1. Identify each example that has the sounds you're interested in.
- 2. For each sound, write out the environment that each instance of that sound appears in:  ${\bf X}\_{\bf Y}$
- 3. Identify natural classes in the environments of one of the sounds.
  - $\hookrightarrow$  Does sound A always come after a sonorant?
  - $\hookrightarrow$  Does sound B always come before a word boundary?
  - $\hookrightarrow$  Does sound A always come after a high vowel?
  - $\hookrightarrow$  etc...

• • • • • • • • • • • • •

Identifying complementary distributions (with or without alternations)

#### **\*** Procedure for identifying complementary distributions:

- 1. Identify each example that has the sounds you're interested in.
- 2. For each sound, write out the environment that each instance of that sound appears in:  ${\bf X}\_{\bf Y}$
- 3. Identify natural classes in the environments of one of the sounds.
- 4. Check whether that natural class appears in the same position in the environment of the other sound.

▲ □ ► ▲ □ ►

Identifying complementary distributions (with or without alternations)

#### **\*** Procedure for identifying complementary distributions:

- 1. Identify each example that has the sounds you're interested in.
- 2. For each sound, write out the environment that each instance of that sound appears in:  ${\bf X}\_{\bf Y}$
- 3. Identify natural classes in the environments of one of the sounds.
- 4. Check whether that natural class appears in the same position in the environment of the other sound.
- If the answer is **no**, then you've identified a complementary distribution!

• • • • • • • • • • • • •

Identifying complementary distributions (with or without alternations)

#### **\*** Procedure for identifying complementary distributions:

- 1. Identify each example that has the sounds you're interested in.
- 2. For each sound, write out the environment that each instance of that sound appears in:  ${\bf X}\_{\bf Y}$
- 3. Identify natural classes in the environments of one of the sounds.
- 4. Check whether that natural class appears in the same position in the environment of the other sound.
- If the answer is no, then you've identified a complementary distribution!
- If the answer is **yes**, then keep looking and try again. If you've exhausted your options (i.e., there's no way to consistently distinguish the environments of the two sounds), then you've identified a **contrastive distribution**.
